Thank you for purchasing an ALIGATOR product.  
Please read this manual for your new smart watch.

## Important instructions

- Handle the product and accessories carefully, protect them from mechanical damage and dirt.
- Protect the product and accessories from extreme temperatures.
- Do not dispose of the product in a fire or expose it to temperatures above +60 °C, there is a risk of explosion. The product contains a built-in battery.
- Protect the product and accessories from falling to the ground.
- The product does not contain any user-serviceable parts, never disassemble the product or accessories.
- Turn off the product on an airplane unless it is expressly permitted to use it.
- Do not use the product near explosives.
- Keep out of reach of children and do not allow them to play with the product. It may contain small parts that could cause suffocation or other injury.
- The software and hardware of the product are constantly updated. The manufacturer therefore reserves the right to change the manual and individual functions of the phone without prior notice.

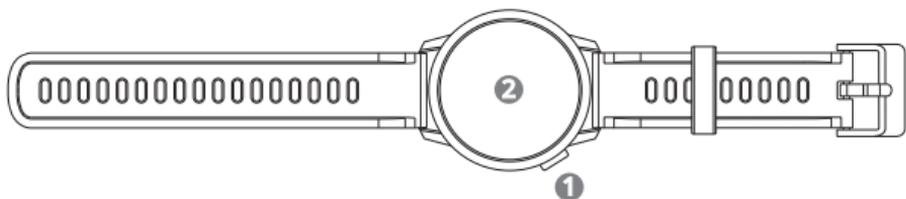

More information, instructions and video tutorials on how to set up a smart watch can be found at

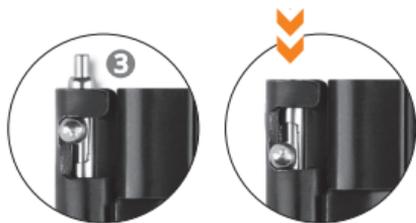

**<http://www.aligator.cz/awprox>**

## Controls and strap fitting

The watch is controlled by a touch screen and a button on the side.

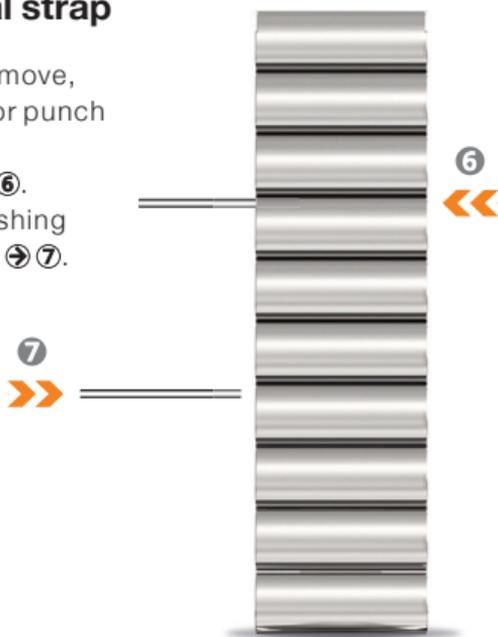

The strap of the watch can be easily put on or taken off using the lever located on each of the lugs at the bottom of the strap ③. Push the lever and the lever will release.

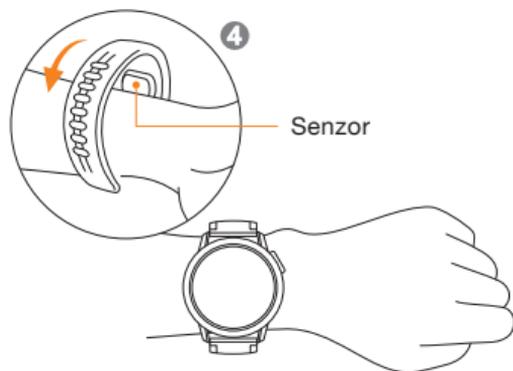

## Shortening the metal strap

For the links you want to remove, use a thin tool to push out or punch out the connecting axes in the direction of arrow ⑥. Reconnect the strap by pushing the washer back into place ⑦.

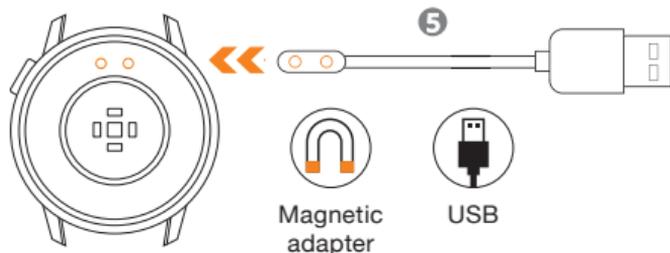

## Wearing a watch correctly

Put the watch on your wrist so that the back with the sensors fits snugly against the surface of your hand, see Fig. ④.

## Charging

Charge the watch before using it for the first time. To charge, use the included magnetic adapter ⑤, which is attached to the contacts on the back of the watch. The magnets will hold the end of the adapter in the correct position. Plug the other end of the adapter into a suitable USB socket. The display will show the battery charge status when connected.

## Turning on and off

To turn the watch on/off, press and hold the button on the side of the watch ① until the watch turns on/off. You will still need to confirm the power off on the watch display ②.

## Control Fundamentals

The watch display is dimmed as standard to save battery power. To activate the watch display, press the button ①. The display will darken itself after a short period of time or you can darken it by pressing the button ①.

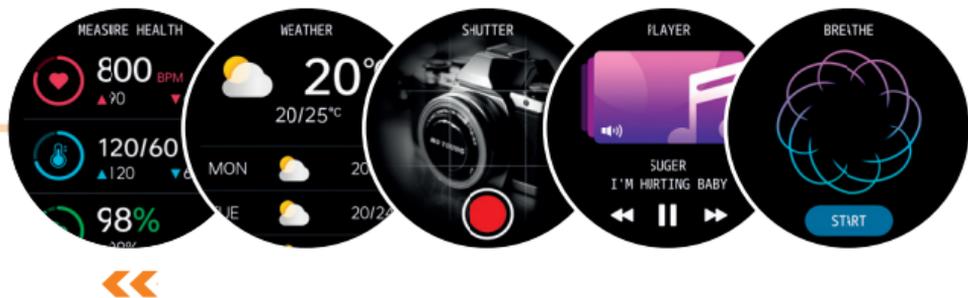

To view **the function menu**, **slide your finger across the display from left to right** (➡) (B) (move backwards to go back). A circular menu (E) is displayed by default. To select a function, tap on the corresponding icon in the menu and tap in the middle of the display to activate it. In the settings, the menu style can be switched to a classic (F) line list (Settings → Style menu).

**By sliding your finger across the display from right to left** (⬅), you can scroll through the screens of each function and measurement value in turn.

**To quickly view messages**, swipe up from the bottom of the main screen (swipe back the other way to go back) (⬆) (C).

**For quick setup and overview**, swipe down from the top of the main screen (swipe back the other way to go back) (⬇) (A). You can quickly switch watch modes, adjust brightness, vibration, or start settings. Connection, battery status and weather information are also displayed.

**To go back up a level in the menu**, either press the button (1) or swipe the display from left to right (➡).

## Feature menu

Ⓑ **Swipe the display from left to right** → to select from the following functions:

**Steps** Number of steps per day. It is always counted from midnight. The value is approximate and may differ from the number of steps actually walked.

**Sleep** Displays information and statistics on sleep duration and quality.

**Heart rate** – the sensor on the back of the watch is used to measure it, it is necessary that the watch is correctly positioned on the wrist. The value is approximate, it cannot be used for medical purposes.

**Sports** Measuring training activity. A variety of sports and activities are available. Select an activity and tap to start. Once the workout has started, the measurement can be paused/stopped by scrolling the screen from left to right and pressing the button.

**Phone** Telephoning function. List of recent calls, dialer option, and view contacts synced with your watch.

**Pressure** Estimated blood pressure – an experimental function, the measured value may not correspond to reality and cannot be guaranteed in any way, an approximation from the heart rate sensor is used for the measurement. Cannot be used for medical purposes.

**Oxygenation** Display of blood oxygenation – experimental function, the measured value may not correspond to reality and cannot be guaranteed in any way, an approximation from the heart rate sensor is used for the measurement. Cannot be used for medical purposes.

**Weather** Current weather information (only if your phone is connected). Swipe up from the bottom  to see the forecast for the next 6 days.

**Trigger** Allows you to remotely control the camera shutter on your phone. Requires launching an application on the phone.

**Player** Allows you to remotely control the music player on your phone. If the phone function of the watch is activated, the sound of the song will be played directly from the built-in speaker in the watch.

**Breathing**  
Functions of breathing exercises.

## Settings

Settings and useful features.

You can set the calling function, brightness, vibration, menu style, view technical information, reset data and more. Also includes useful functions (stopwatch, timer and more).

## Useful Features

Select **Settings** from the features menu and choose one of the useful features:

### Game

2 games to pass the time.

### Stopwatch

Simple stopwatch.

### Alarm clock

Possibility to set several alarms directly in the watch.

### Timer

Possibility to set several alarms directly in the watch.

### Application

Displays a QR code to easily download the watch app to your phone.

### Phone search

When activated, triggers sound on the phone in the snooze mode, making it easier to find the phone.

## Information screens

Ⓓ When you swipe the screen from **right to left** ←, the information screens for the watch functions will gradually appear:

### Today

Displays the number of steps, last sleep time, and time of training activity. Tap each value to view detailed information.

### Health

Displays your last heartbeat, blood pressure and blood oxygenation. Tap each value to start a new measurement.

### **Weather**

Displays weather information. Scroll up from the bottom to view the forecast for the next 6 days.

**Spouse** Allows you to remotely control the camera shutter on your phone. Requires launching an app on the phone.

### **The Player**

Allows you to remotely control the music player on your phone.

### **Breathing**

Functions of breathing exercise.

### **Assistant**

If the watch phone feature is activated, tap the icon to start the voice assistant on your phone.

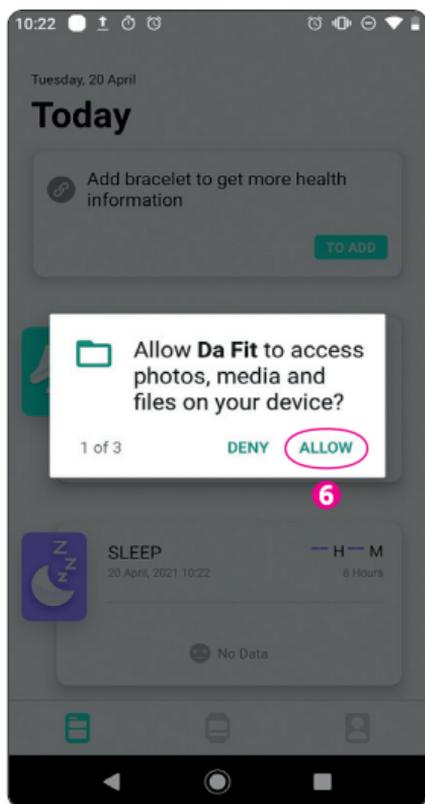

### **Phone**

If the watch phone function is activated, the phone controls (Call history, dial pad and contacts) are displayed.

## Connecting the phone

To take full advantage of all the features, you need to connect the smart watch wirelessly to the application on your phone.

Download and install **Da Fit** to your phone:

**Attention!** When first starting the app, it is necessary to allow all the permissions that you will be asked for, otherwise it will not work properly ⑥.

After enabling all permissions, the profile page will open. Enter your details – gender, height, age, etc. To complete the settings, press the button below with the **Confirmation** icon.

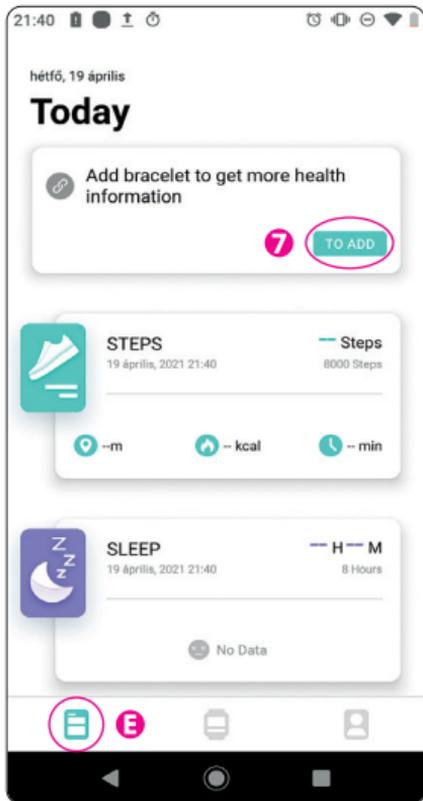

(For more accurate records and value calculation, we recommend entering information about you according to reality).

## Connect the watch to the phone:

1. In the app, tap the first icon from the left in the bottom of the screen to go open **Today** view (E).
2. Move the watch close to the phone and press the **To Add** button (7).
3. The application displays a list of available devices.
4. Tap to select **Aligator Pro X**.
5. The watch will be paired.  
Done :-)

## Display the measured data in the phone

After pairing the watch with the phone, launch the **Da Fit** app and touch the first icon on the left at the bottom of the app screen. The **Today** screen appears with information downloaded from the watch – number of steps, sleep, heart rate record, temperature, blood pressure, blood oxygenation, training activity record and more. After tapping on the card of some measured quantity, you can also view the records from the previous days, or select the date about which you want to find out information from the calendar.

**Note:**  
*data is continuously downloaded from the watch via a wireless connection, but the watch must be within range of the phone – up to several meters.*

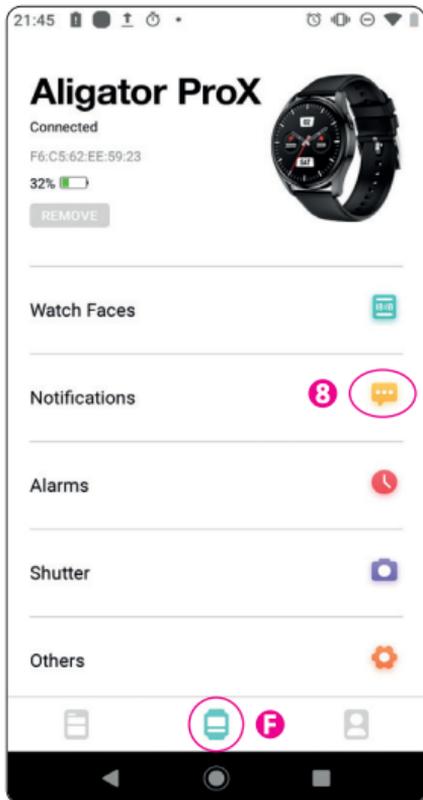

## Watch settings

The watch is set using the **Da Fit** app on the phone. At the bottom of the application screen, touch the middle icon with the watch symbol. Now you can make all the settings of the watch, (change the watch face, alarms, notifications and many other functions).

## Watch notification settings

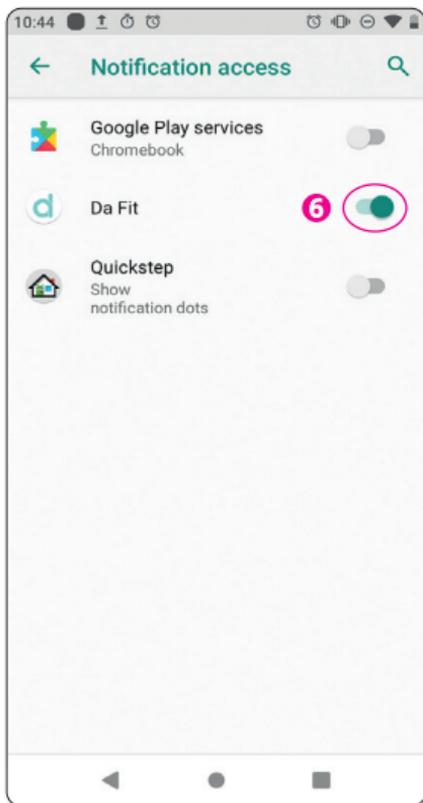

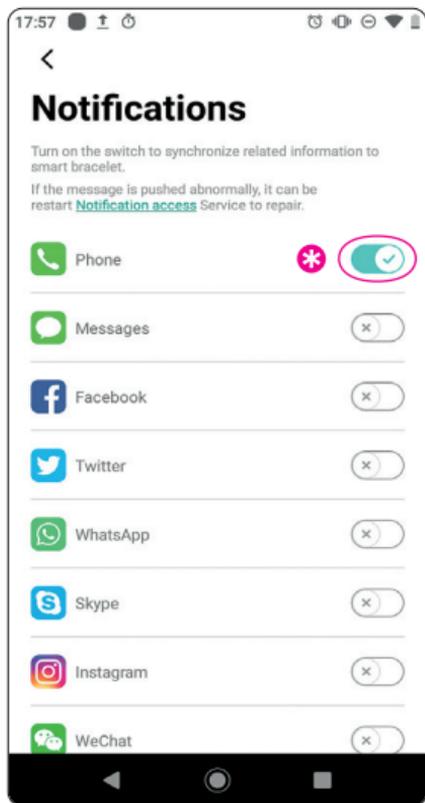

An important smart watch function are the notifications for the incoming calls, SMS messages, messages from social networks and notification of other applications.

1. Tap the middle icon at the bottom of the app to go to the device screen ⑥.
2. Select **Notifications** ⑧.
3. A list of notifications appears. You can activate them by tapping the switch next to the name ⑨.
4. When the notification is turned on, the application will ask for access permissions – it is necessary to **allow** access for proper operation ⑩. The first time you set up, the screen for allowing access to notifications also appears. Turn on the switch next to **Da Fit** ⑪.

## Watch faces

Aligator Watch Pro X offers a very wide range of watch face designs. Several are pre-installed directly in the watch. Thanks to the app, dozens of other watch faces are available. You can also set your own photo or image directly to the background of the watch's dial.

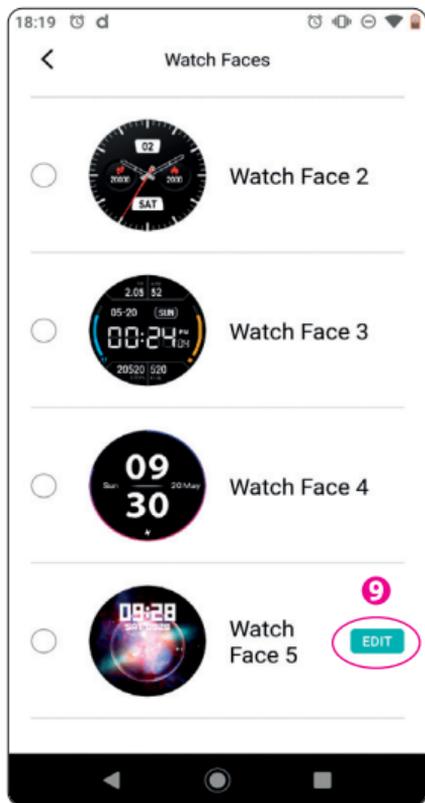

## Change the watch face

1. Press your finger against the touch screen until the current watch face shrinks.
2. Swipe sideways to select from available watch faces.
3. Touch the screen to confirm the selected watch face.

## Setting other watch faces using the app

1. Go to the device screen by tapping the middle icon at the bottom of the application and select **Watch Faces**.
2. The watch faces installed in the watch are displayed.
3. Select **More Watch Face** at the bottom of the screen. Wait a while until all available

## Setting your own image to watch face

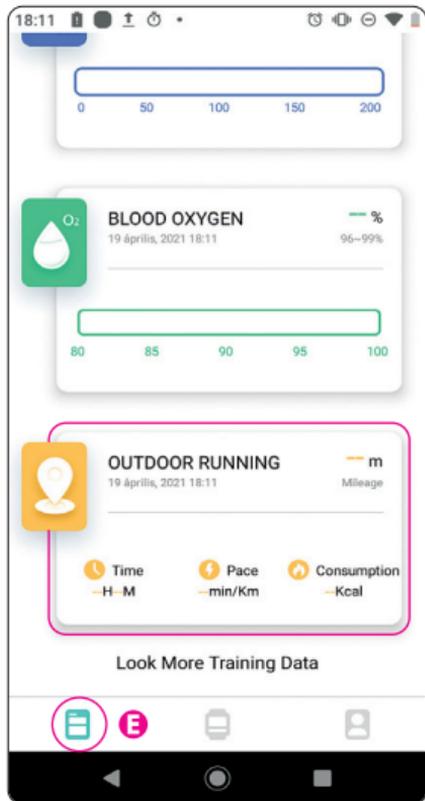

1. Go to the device screen by tapping the middle icon at the bottom of the application and select **Watch faces**.
2. Select the 5th watch face and tap the **Edit** button next to it ⑨.
3. Use the **Select Picture** button to set your own photo or image as the background of the watch face.
4. You can also set your own font color and location of the information on the screen.
5. Press the **Save** button on the top right to save the changes and load your own watch face into the watch.

## Training recording using the watch or the app

watch faces are loaded (new items are added gradually).

4. Tap on the watch face you want to use and then tap on the **Download** button.
5. Watch face is then download and installed, the progress is displayed on the phone screen.

As mentioned in the **Smart Watch Functions** chapter, the watch allows you to record your workouts for several different sports. However, you can also record your training using the **Da Fit** app on your phone. In this case, the watch only serves as a step-counter and heart rate sensor and the training will be recorded directly by the phone app, including the route obtained

## Phone and music functions in the watch

Thanks to the built-in microphone and speaker, the watch allows you to make phone calls and listen to music. When activated, it acts as an advanced hands-free headset, allowing you to answer and place calls and dial phone numbers and contacts directly on the watch.

### Attention!

*When you connect and activate the calling function, the music and audio playback from your phone and the voice assistant control are also redirected to the watch.*

## To activate and deactivate the telephoning function

In order to use the phone feature on your watch, you must first enable it on your watch and then pair your phone to your watch using the dual wireless audio connection.

1. On your watch, go to **Settings** in the features menu, then tap **Phone to display it: On** – the phone icon turns green.
2. On your mobile phone, in the Bluetooth settings,

from the phone's GPS receiver. To start a workout in the **Da Fit** app on your phone, touch the first icon from the bottom left of the screen (E) and go to the **Today** screen. Tap the **Outdoor Running** tab and press the **Start** button to start the recording of the training. After the training, the training data are saved and it is possible to view the training information and route in the calendar.

select **Pair new device**  
and search for **Audio\_ProX\_...**

3. Connect to this device.
4. The phone function of the watch is paired. Done!

To **deactivate** the phone feature on your watch, open **Settings**, then tap **Phone to display it:**

**Off** – The icon turns grey.

To permanently deactivate the feature, delete the **Audio\_ProX\_...** device from the list of paired devices in the Bluetooth settings on your phone.

**Attention!** *When the phone function is active, the battery life will be reduced.*

## Make calls and play music directly on your watch

- Tap the red icon to reject an incoming call, and the green icon to accept it **G**.
- Tap the phone icon **H** to switch the phone call between your watch and phone.
- Tap the speaker icon **K** to adjust the volume.
- The microphone can be switched on/off using the microphone icon **L**.  
If the phone call function is active, music and audio

from your phone will be transferred to your watch. You can also use the remote control function of the player on your mobile phone with the watch and enjoy music directly on the watch thanks to the built-in 3W speaker.

## More features for making calls on your watch

1. Select **Phone** from the features menu.
2. The telephony menu will appear :
  - **History** – displays a list of recent calls – tap to call the selected number/name again.
  - **Dialpad** – used to manually enter a phone number for a call.
  - **Contacts** – a list of your favourite contacts to call from your watch. Set up using the app on your phone.

## To add favourite contacts in the app

1. Launch the **Da Fit** app on your phone
2. Go to the watch settings screen by tapping the middle icon at the bottom of the app .
3. Select **Favourite Contacts**.
4. Press **Add** and select up to 8 contacts in your phonebook. You must **allow** the app to access your contacts to work properly.
5. After selecting your contacts, press **Confirm**, first in the top right corner and then on the main screen.
6. Contact transfer will be initiated.
7. Completion of the transfer is indicated in the application.

**Attention!** *The phone needs to be close to the watch to work properly. Depending on the environment, the range of the wireless connection can vary from units to low tens of meters.*

## Find your phone with your watch and vice versa

If your watch is connected to your phone, it can be easily located. Select **Settings → Phone search** from the watch's features menu. You can then tap the icon on the watch screen to start playing audio on the watch. If you're looking for a watch, launch the **Da Fit** app on your phone, go to the watch settings screen (middle icon at the bottom) and select **Other → Find a device**. The watch will light up and vibrate.

**Attention!** *Vibration must be enabled on the watch and the battery must not be low. Otherwise, the watch screen will only light up.*

## Edit personal settings and data

To edit personal information and change some other application settings, touch the icon on the right of the bottom of the screen to display the **My profile** screen. Now you will be able to set, weight, age and other information about you, as well as the daily goal.

## Water resistance IP67

The watch is designed to be waterproof to the IP67 standard. However, we strongly recommend that you avoid to the contact with water to the maximum extent possible. Microscopic cracks in the seal may occur during the use of the watch due to impact or wear of the case. In this case, water may get inside watch and cause a damage not covered by the warranty. Never dive, bathe or shower while wearing your watch – pressurized water or hot water could penetrate the watch and cause damage not covered by the warranty. Never press the button while the case is in contact with water, as this could cause water ingress and damage not covered by the warranty.

## Troubleshooting

### Alerts do not appear on the watch

Please make sure you have granted **Da Fit** app the access to notifications according to above instructions (see chapter **Notification setting**). Alternatively, open the phone settings and enter **Access notifications** into the search box and make sure access is turned on for **Da Fit**.

### The watch does not connect to phone

If you are unable to connect the watch to your phone, try turning Bluetooth Off and then On on your phone and /or restarting your phone. If the watch does not connect, try searching for it again in the application. If the watch does not connect, reset it – swipe from left to right on screen watch to display menu, choos **Settings** and then select **Reset**. Then restart the phone and reconnect the watch in the app as described in the chapter **Connecting phone**.

### The watch cannot be charged with a power bank

The charging current of the watch is very small. Therefore, some power banks mistakenly evaluate the connected watch as a phone that is already charged and automatically turn off charging.

More information, instructions and video tutorials on how to set up a smart watch can be found at <http://www.aligator.cz/awprox>

# Safety and ecology

## Built-in battery

The product contains a built-in single-cell lithium battery, which does not belong to ordinary municipal waste, it may contain substances that are harmful to the environment! After the product has reached the end of its service life, the battery can be removed and handed over for further ecological processing.

## Instructions for safe battery removal by user or by a qualified professional

make sure that the battery is completely discharged (or let the watch fully discharge). Carefully peel off the back of the watch with a knife or chisel. Danger of injury! Disconnect the supply wires to battery or cut them with scissors one by one, to prevent a short circuit. Carefully remove the battery so that the battery is not perforated or deformed – risk of electrolyte leakage, short circuit and injury! Observe regular safety work and use protective equipment or leave it to experts!

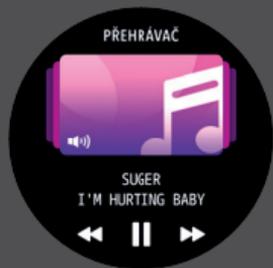

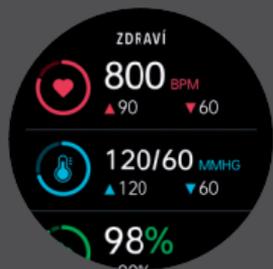

## Used electrical equipment

Never dispose of the product in normal municipal waste, it may contain substances dangerous for the environment! After use, it must be handed over to the appropriate collection point, where its recycling or ecological disposal is ensured. Ask your dealer or the municipal office, where is such place, or you can hand over the product directly to seller or to one of the branches of ADART COMPUTERS s.r.o. It is illegal to handle the product in violation of the above instructions!

## Declaration of Conformity

Hereby ADART COMPUTERS s.r.o. declares that the Aligator Watch Pro X radio equipment type, Y32, is in compliance with the Directive 2014/53/EU. The full text of the EU declaration of conformity is available on the following website: [www.aligator.cz](http://www.aligator.cz)
